

VIRGINIA

VISION PROGRAM SUMMARY

2022-2023

June 30, 2023

The VA Code § [22.1-273](#) mandates school based vision screenings for students in K, 2nd or 3rd, 7th and 10th grades and all new students. This mandate affects roughly 370,000 students statewide annually.

In 2018, the Virginia General Assembly passed a budget amendment appropriating funds to VDOE to support technology based, comprehensive children’s vision screening programs in schools and/or divisions with 40% or more of the student population eligible for free or reduced lunch. Conexus is the private, non-profit 501 c 3 organization that has worked to provide programming through this appropriation. The annual budget appropriation of \$391,000 provides for program delivery for up to 55,857 (15%) of K-12 students affected by the mandate each year. The 2022 General Assembly approved an increase of \$350,000 to support services to an additional 50,000 students for the 2022/2023 school year. To date this program has allowed for the vision screenings of close to 300,000 Virginia students, finding nearly 100,000 in need of follow-up vision care.

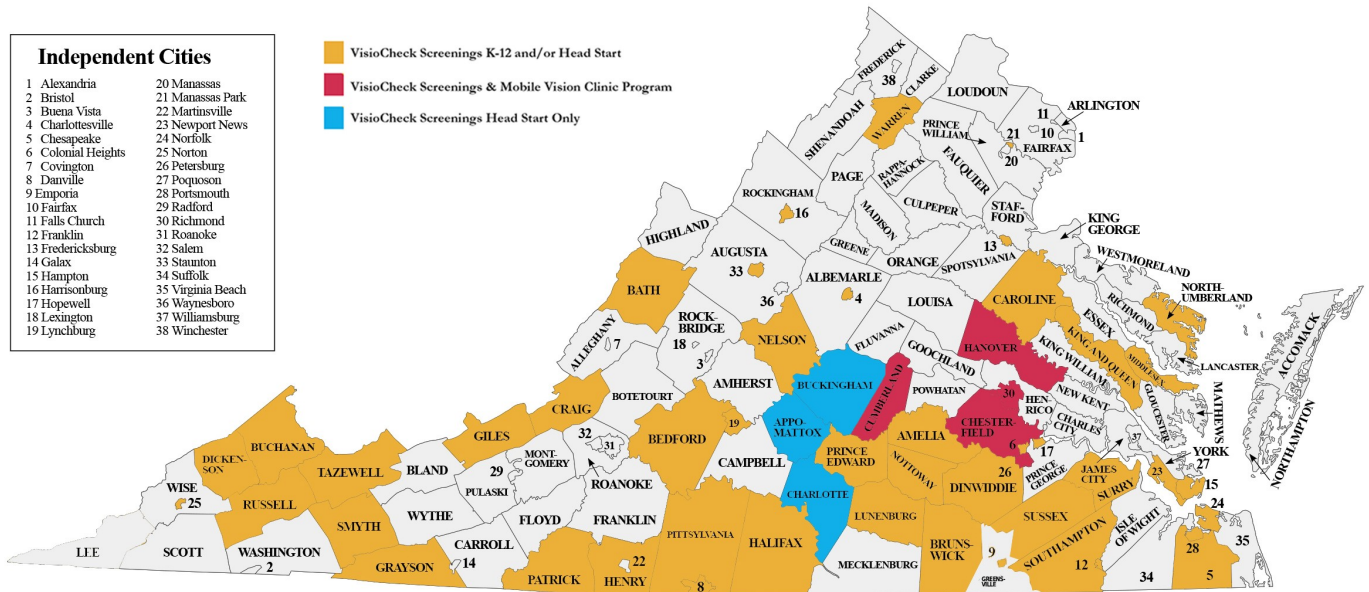

The following report summarizes Conexus’ program activity for the 2022/2023 school year. The vision screening program, VisioCheck, was delivered in 49 Virginia school divisions, delivering 81,097 screenings, finding 29,374 (36.22%) students in need of a follow-up eye exam. The mobile vision delivered services in five Central Virginia school divisions and provided 5,798 eye exams to students in those divisions who failed their Conexus vision screening.

The following report contains the screening outcomes for each individual school division served by the Conexus VisioCheck, technology based children's vision screening program for the 2022-2023 school year. The breakdown of information is to allow individual divisions to see how uncorrected vision may be impacting their students, classrooms and schools.

Elementary schools traditionally conduct their vision screenings by classrooms. Conexus began sorting vision screening data by classrooms to explore the possibility that when students are grouped by their learning ability or progress, one variable that may be impacting learning is uncorrected poor vision. The charts for each school provide a breakdown of the number of children screened in each school, the number of referrals in that school, *where applicable* the number of classrooms screened in that school and then the breakdown of classrooms by the percentage of the number of students in the classroom failing their vision screening.

The national average for children's vision problems is 25%. Schools with rates of vision problems higher than 30% are highlighted in orange. Classrooms are broken down into three categories -- **Average** 0-29.9%, **High** 30-39.9%, **Excessive** 40% or greater. When 40% or more of students in a classroom are not seeing as well as they should it impacts the entire class and teacher, not just those students with uncorrected poor vision.

This report opens with the statewide cumulative chart below. This chart shows Conexus screened 81,097 students and found 29,374 (36.22%) with a potential vision problem. This number is well above the national 25% average and is higher than in previous years (possibly as a result of the increased screen time resulting from COVID school closures and virtual learning in the 2020-2021 school year). There were 2,539 individual classrooms screened and 663 (26.11%) of those classrooms had 40% or more of the students fail their vision screening.

The national average for vision problems in school aged children is 25%.

Classrooms, schools, or divisions reporting 25% or less of their students with potential vision problems fall within the national average. Almost all school divisions will contain segments of their population with higher than average vision problems.

Classrooms where **40% or more** of the students require follow up vision services are considered **excessively high**; this concentration of students with potential vision problems affects the classroom and/or school as a whole. The number of classrooms in each school in the division where 40% or more of the students require follow-up vision services are highlighted in orange.

Schools where more than 30% of the students require follow-up vision services are also highlighted in orange.

** some schools, especially secondary schools, do not record or manage their screening results by classroom.*

The national average for vision problems in school aged children is 25%.

Classrooms, schools, or divisions reporting 25% or less of their students with potential vision problems fall within the national average. Almost all school divisions will contain segments of their population with higher than average vision problems.

Classrooms where **40% or more** of the students require follow up vision services are considered **excessively high**; this concentration of students with potential vision problems affects the classroom and/or school as a whole. The number of classrooms in each school in the division where 40% or more of the students require follow-up vision services are highlighted in orange.

Schools where more than 30% of the students require follow-up vision services are also highlighted in orange.

The national average for vision problems in school aged children is 25%.

Classrooms, schools, or divisions reporting 25% or less of their students with potential vision problems fall within the national average. Almost all school divisions will contain segments of their population with higher than average vision problems.

Classrooms where **40% or more** of the students require follow up vision services are considered **excessively high**; this concentration of students with potential vision problems affects the classroom and/or school as a whole. The number of classrooms in each school in the division where 40% or more of the students require follow-up vision services are highlighted in orange.

Schools where more than 30% of the students require follow-up vision services are also highlighted in orange.

* some schools, especially secondary schools, do not record or manage their screening results by classroom.

The national average for vision problems in school aged children is 25%.

Classrooms, schools, or divisions reporting 25% or less of their students with potential vision problems fall within the national average. Almost all school divisions will contain segments of their population with higher than average vision problems.

Classrooms where **40% or more** of the students require follow up vision services are considered **excessively high**; this concentration of students with potential vision problems affects the classroom and/or school as a whole. The number of classrooms in each school in the division where 40% or more of the students require follow-up vision services are highlighted in orange.

Schools where more than 30% of the students require follow-up vision services are also highlighted in orange.

* some schools, especially secondary schools, do not record or manage their screening results by classroom.

The national average for vision problems in school aged children is 25%.

Classrooms, schools, or divisions reporting 25% or less of their students with potential vision problems fall within the national average. Almost all school divisions will contain segments of their population with higher than average vision problems.

Classrooms where **40% or more** of the students require follow up vision services are considered **excessively high**; this concentration of students with potential vision problems affects the classroom and/or school as a whole. The number of classrooms in each school in the division where 40% or more of the students require follow-up vision services are highlighted in orange.

Schools where more than 30% of the students require follow-up vision services are also highlighted in orange.

Conexus Celebrates 10,000 Mobile Clinic Exams

SAMPLE VISION SCREENING PARENT REPORT

Students who do not pass their vision screening may not be seeing as well as they should, and this could affect their school performance.

Your child recently received a vision screening at school through the Conexus VisioCheck program and did not pass the screening. The results of the screening are on the back of this page.

Your child will receive a **FREE eye exam and glasses (if needed)** at school during the school year.

Your child is not required to participate in this free program. If you **DO NOT** want your child to receive this free service, **CONTACT YOUR SCHOOL NURSE TODAY to opt-out.**

IMPORTANT: If your child is currently under the care of an eye doctor (within the last year) please check with that eye doctor before participating. Your child should bring or wear their glasses to the eye exam at school.

WHAT YOU NEED TO KNOW:

- Your child's screening results will be sent home after the screening.
- If you do not want your child to receive a free exam contact your school nurse.
- The exam will be given by a licensed eye doctor from Conexus at your child's school.
- The eye exam **does not** use eye drops to dilate the eyes.
- If your child needs glasses, they will pick their frames for their glasses at school on the day of the exam.
- Glasses will be returned to your child at school about 2-3 weeks after the eye exam.
- You will receive a copy of the doctor's report with your child's exam results following your child's exam.
- Conexus will give a copy of the exam results to the school nurse as part of your child's school health record.
- Conexus may bill your insurance if your child has vision insurance. This service is free to you. **You will not receive a bill** even if your child doesn't have insurance or insurance will not pay.
- Conexus may take and use pictures and media from the clinic, which may or may not include your child's image, for program materials. No personal information about your child will be released. To opt out of photos only contact your school nurse.
- Parents or caregivers are not required to be at the exam but are welcome to attend.

IMPORTANT: If your child is currently under the care of an eye doctor (within the last year) please check with that eye doctor before participating. Your child should bring or wear their glasses to the eye exam at school.

If you have questions, contact programs@conexusvision.org.

Es posible que los estudiantes que no hayan pasado su examen de la vista actualmente no puedan ver tan claro como deberían y esto podría afectar su desempeño escolar.

Se le realizó a su hijo una prueba de detección de problemas de visión en la escuela a través del programa Conexus VisioCheck y los resultados de su hijo no fueron óptimos. Puede encontrar los resultados de la prueba en el reverso de esta página.

Su niño recibirá un **examen de seguimiento y lentes (de ser necesario) GRATIS** en la escuela durante el año escolar.

No es requerido que su niño participe en este programagratis. **SI NO** desea que su niño reciba este servicio gratis, **COMUNÍQUESE CON LA ENFERMERA ESCOLAR para notificarlo.**

IMPORTANTE: Si su niño ha estado en tratamiento con un oculista (durante el pasado año) favor de verificar con ese oftalmólogo antes de participar. Su niño deberá llevar sus lentes al examen de la vista de la escuela.

LO QUE NECESITAS SABER :

- Los resultados de su niño serán enviados a casa después de los exámenes.
- Si no desea que su niño reciba este examen gratis, comuníquese con la enfermera escolar.
- Un oculista licenciado de Conexus proveerá el examen en la escuela de su niño.
- El examen **no** usará gotas para dilatar los ojos.
- Si su niño necesita lentes, podrán escoger su marco al momento del examen.
- Los lentes serán fabricados y entregados en la escuela varias semanas después del examen.
- Usted recibirá copia del informe médico de su niño después del examen.
- Conexus compartirá los resultados del examen con la enfermera escolar como parte del registro de salud de su niño.
- No tendrá que pagar costo alguno. Si su niño tiene seguro de vista, Conexus podrá facturar su proveedor. **NO será facturado** aunque no tenga seguro médico o si el seguro no cubre el costo.
- Conexus podrá tomar y usar fotos y material publicitario de la clínica, que pueda o no incluir la imagen de su niño en materiales del programa. Información personal de su niño no será compartida. Para optar por no recibir fotos, póngase en contacto con la enfermera de su escuela.
- No es requerido que los padres o encargados estén presentes durante el examen pero están invitados a hacerlo.

IMPORTANTE: Si su niño ha estado en tratamiento con un oculista (durante el pasado año) favor de verificar con ese oftalmólogo antes de participar. Su niño deberá llevar sus lentes al examen de la vista de la escuela.

De tener alguna pregunta, favor de comunicarse a programs@conexusvision.org.

ROC 5, Ver. 7.2.6.0

Vision screening does not replace a complete eye examination by an ophthalmologist or optometrist. Vision screening must be conducted regularly as eyes may change over time! Children with screening result "Refer" should be referred to an ophthalmologist or optometrist.

Your child will receive a **FREE eye exam and glasses (if needed)** at school during the school year. Your child is not required to participate in this free program. If you **DO NOT** want your child to receive this free service, **CONTACT YOUR SCHOOL NURSE TODAY to opt-out.**

You may also take your child to an eye doctor of your choice.

This is a screening, not an eye exam. Vision problems can only be diagnosed and treated through an eye exam from an eye care professional.

Su hijo/a recibirá un examen de seguimiento y lentes (de ser necesario) **GRATIS** en la escuela durante el año escolar. No es requerido que su niño participe en este programa gratis. **SI NO desea** que su niño reciba este servicio gratis, **COMUNIQUESE CON LA ENFERMERA ESCOLAR** para notificarlo.

Si desea, lleve a su niño a su propio médico.

Se trata de una proyección, no un examen completo de la vista. Problemas de visión sólo pueden ser diagnosticados y tratados a través de un examen de la vista de un profesional medico ocular.

APPENDICES

Conexus (*formerly Prevent Blindness Virginia*) a private, non-profit 501 (c) 3 was established in 1957 as the local affiliate of Prevent Blindness America. In 2014, Conexus took on its new name as part of a separation from the national organization in order to make children's vision its sole focus with a mission to eliminate poor vision as a barrier to academic success.

For a decade leading up to the introduction of technology, Conexus worked with a network of over 1,800 school nurses to support state mandated vision screening efforts in 128 school divisions across the Commonwealth.

As technology became available, Conexus began a careful and controlled implementation and over the course of seven years, developed the propriety VisioCheck program to maximize the efficiencies and benefits of technology into a results oriented screening program.

Conexus was instrumental in working with product developers to advise on technological and software needs required for the successful integration of technology into mass vision screenings.

Conexus is now the preeminent provider of technology based comprehensive children's vision programming in Virginia, maintaining one of the largest data sources for children's vision assessments in the nation. Since program inception Conexus has delivered VisioCheck to over 419,000 students across the Commonwealth.

The impressive data generated through VisioCheck has allowed Conexus to call attention to the significant public health and education crisis of poor vision in the classroom. In addition to pointing toward the need for consistent, high quality vision screenings, the results directed Conexus to expand its services to support the growing need to connect students who are found to have a potential vision problem to vision providers and resources in their community.

In 2017 Conexus established Conexus Mobile, a service that brings onsite eye exams and glasses directly into schools as a means to address access to care in some of the Commonwealth's most challenged schools and divisions. Conexus now operates two full time mobile vision clinics and has provided over 15,132 eye exams at no cost to students or their families.

Conexus is in the midst of a five year Campaign with a goal to have four full time clinics operating in the divisions showing the greatest need. Currently Conexus has secured the capital to run three clinics and in 2023 established a process for claims filing with Medicaid for eye exams delivered to students enrolled in Medicaid on their date of service which is a significant factor in long term program sustainability and geographic expansion.

Conexus operates under the direction of a thirteen member Board of Directors and enjoys the collective eighty years of experience represented by the organization's senior staff.

Resolution

Conexus Council for Pediatric Vision and Conexus Board of Directors

Whereas, the Council for Pediatric Vision is charged with monitoring and reviewing vision health programs to recommend public health best practices to eliminate poor vision as a barrier to success;

And Whereas, technology has provided opportunities for improved vision screening, improved data collection and improved communication of potential eye health issues to families;

And Whereas, the Council for Pediatric Vision requested a study of the accuracy, effectiveness, and efficiency of VisioCheck in school age population, finding it to: be highly accurate in determining refractive errors; cause earlier and more effective interventions to improve vision; and be four times more efficient than traditional chart-based screenings, thus saving time and money;

And Whereas, The VCU / Conexus study was conducted in collaboration with Chesterfield County Public Schools with Third Grade Students;

Therefore, the Council for Pediatric Vision hereby recommends the VisioCheck program, for its inclusion of highly effective vision screenings, communication, education, and quality measurement components-for completing mass vision screenings in the school environment.

Positive Predictive Value (PPV)

Probability that students referred through each method truly have a vision problem.

VisioCheck PPV = 85.4%; traditional screening method PPV = 77.3%.

Note that VisioCheck not only refers more students (is more sensitive), but a higher percentage of those referred have a vision problem (meaning that VisioCheck is also more accurate). VisioCheck consistently has an over-refer rate of less than 2.5% and *identifies students with vision problems that are missed by traditional screenings.*

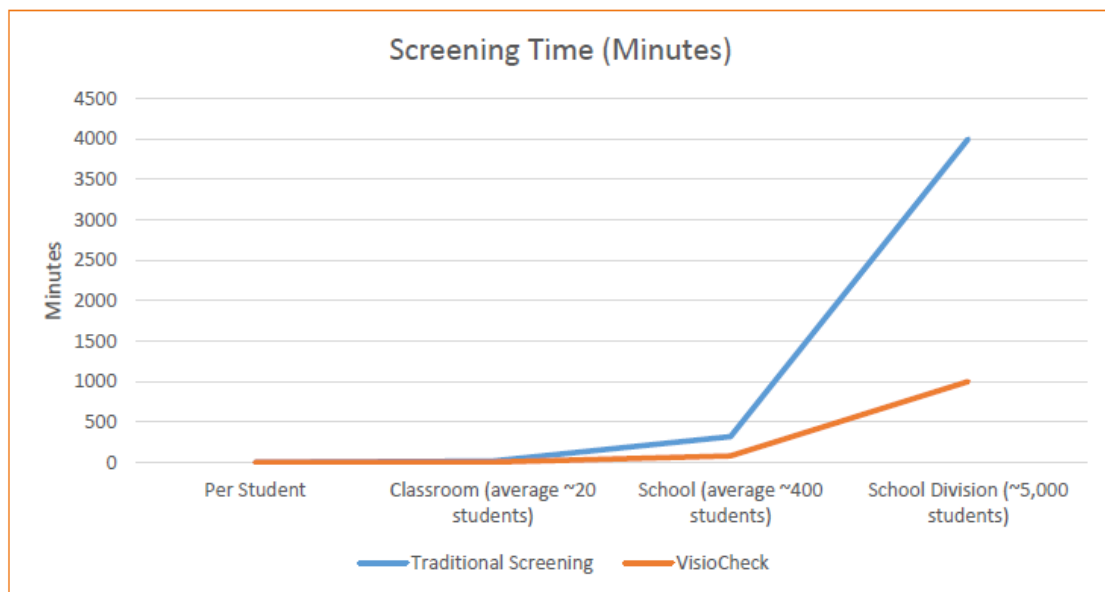

Efficiency of Screening

Time savings increase exponentially as the efficiencies of VisioCheck are employed across classrooms, schools, and school divisions.

Based on the VCU study, the average time for an RN to conduct the traditional vision screening is **0.8 minutes** (shown through experience to be significantly longer in some cases, depending on experience and training). The average time for a credentialed VisioCheck screener is **0.2 minutes**.

This does *not* include the time it takes to remove students from their classrooms and wait time in the screening area for traditional screenings, factors which are eliminated through VisioCheck's ability to screen in the classroom, often with students seated at their desks – *saving valuable instructional time*.

Council for Pediatric Vision

Co-Chairmen:

Bo Pegram, OD

Ed Wortham, MD

Council Members:

Teresa Isom, RN, BSN

Margaret Meara, EdD

The Hon. Roxann Robinson, OD

Evan Silverstein, MD

The Council for Pediatric Vision, whose makeup includes ophthalmologists; optometrists; school health professionals; school division leadership; and Conexus Program leadership, has carefully developed the Conexus Mobile Vision Clinic providing eye exams and glasses to students at public schools in Virginia. During this current school year (2021-2022) Conexus Mobile Vision will provide eye exams and glasses (if prescribed) to 4,000 students living in poverty, most of whom would likely never access eyecare without this Mobile Vision service. Eye exams on the Mobile Vision Clinic are performed on-site by Virginia licensed optometrists and ophthalmologists, and the services of Virginia licensed opticians are used on-site to fit and dispense glasses. The Conexus Mobile Vision Clinic currently serves Chesterfield County (Title I Schools), Richmond, Petersburg, and Cumberland County.

The effectiveness, efficiency, appropriateness, impact, protocols, and policies have been developed, studied, and tested by the Council for Pediatric Vision, and a published study by VCU medical students. The challenge we've been seeking help from the General Assembly is in securing Medicaid reimbursement through a viable claims process for Medicaid covered services provided to Medicaid enrollees. Conexus currently raises private funds to support all kids in these schools thus receiving Medicaid reimbursement for Medicaid eligible kids would allow Conexus to better leverage the private funds and expand services to more kids.

The work of the Conexus Mobile Vision Clinic is overseen by the Council for Pediatric Vision, delivers services provided by Virginia Licensed eyecare providers, and has successfully delivered eyecare services to nearly 8,000 students in the region's most economically challenged schools and communities. While the "gold standard" eye exam includes dilation, this is not "required" in existing exam codes. Utilization rates indicate that the children living in poverty served by the Mobile Vision Clinic at school are being provided access to care that otherwise would be inaccessible to them. The addition of these requirements (dilation, wide angle lens technology, etc.) would be impractical and prohibitive in the school setting, serving students through a large-scale program. The Mobile Vision Clinic program is designed to provide a thorough, approved exam. The primary function of the clinic is to properly identify and support the correction of refractive errors through the prescription of eyeglasses. Children who are suspected to have additional vision or eye health related issues found through the mobile clinic exam are referred for additional follow up. This medical referral is delivered to families with the additional support from the school nurse to help encourage treatment.

What’s the difference between traditional school based screening and Conexus technology based comprehensive vision program?

Traditional school based vision screenings most often utilize wall-charts to test a student’s acuity at a distance. Acuity results are recorded and parents are notified of a pass/fail result as part of a general health report. Traditional screening typically places the focus on the act of screening.

A *comprehensive* children’s vision program, like VisioCheck, is multifaceted with very specific goals. Screening is just one component of an overall program to help ensure children’s healthy vision. A quality comprehensive children’s vision program should be outcome oriented and must also contain the following:

- Training
 - Certified and credentialed technicians
 - Consistent, reliable, and scientific screening process
 - Parental education
 - Relevant, informative, and action specific result communications with parents (Pass and Refer)
 - Resources for care for those without access
- Follow-up to include data collection, reporting, and regular program analysis.

A comprehensive program is designed to change the way we view the importance of healthy vision and move people to **action** — ultimately getting under the care of an eye care provider, helping to support a lifetime of good vision.

How does the technology work and what conditions does it attempt to detect?

Conexus currently utilizes PlusOptix. This is an auto refractor. A trained technician uses the device which takes a series of very rapid pictures of a child’s eyes. The software instantly analyzes the images and within 1-5 seconds evaluates:

Refraction: Hyperopia, Myopia, Anisometropia, Astigmatism

Pupil Size: Anisocoria

Corneal Reflex: Strabismus

and provides a **PASS or REFER analysis for:**

Myopia (nearsightedness)

Hyperopia (farsightedness)

Anisometropia (unequal refractive power)

Astigmatism (blurred vision, eye structure problem)

Anisocoria (pupil size difference)

Strabismus (corneal reflexes, symmetry)

Is the technology based screening accurate?

Conexus participated with VCU in a 2016 study to evaluate the effectiveness of the PlusOptix technology in school aged students. The study compared chart based acuity screening to that of the PlusOptix, and found the technology (when used by a trained technician) to have a positive predictive value of 85.4% in comparison to the chart based screening performed by a trained RN, which had a positive predictive value of 77.3%.

Is there a time savings associated with the use of technology?

The VCU study referenced above found the technology based screening to be minimally four times faster than traditional chart based screenings. Technology based screenings take, on average, 5-10 seconds/student screened, and a trained, seasoned technician can screen 400 students/day. Traditional screenings often take days or even weeks to complete.

Additionally, students do not need to leave their seats in the classroom to be screened, resulting in minimal classroom disruption and lost instructional time.

Should VDOE and VDH recommend schools purchase technology to perform the state mandated vision screenings?

Technology alone will not produce improved vision outcomes for students.

Technology and the screening process are just one component of an effective, results oriented screening program.

Without improved parental communications and results reporting, data collection, and regular ongoing program analysis and evaluation, the benefits of an improved vision screening process are lost on the inability to achieve improved vision outcomes.

Outsourcing technology based **comprehensive vision screening** provides the greatest return on investment through the most fiscally responsible process, minimizing:

- Equipment needs — each piece of equipment costs \$7,000
- Equipment maintenance, management, depreciation and software/technology upgrades as necessary or required
- Personnel
- Training
- Resource management

Additionally, purchasing equipment across divisions or schools does not create a consistent program resulting in the extensive data, which allows the VDOE to evaluate trends in education and help to direct and allocate resources to support improved outcomes.
